# Mobilize | WordPress Plugin

version 2.0

The **Mobilize** plugin uses CSS3 only to generate a mobile menu from an existing WordPress menu and displays it for resolutions lower than 720px width (customizable). The menu is assigned via **Appearance** -> **Menus** section and can be a new menu or an existing one (usually a duplicate of the main/primary menu).

**Mobilize** menu accepts an unlimited number of menu levels, although not more than 3 levels are recommended. The menu slides in from the left and it is called by the top link ≡.

**Mobilize** works with any theme, doesn't use any JS code and it depends on FontAwesome (included).

The backend options are no-nonsense, simple and clear.

### Features

- HTML5 compliant
- Responsive
- Works with all themes
- Small, fast and performant

### Installation

1. Upload the **mobilize** folder to your '/wp-content/plugins/' directory
2. Activate the plugin via the **Plugins** menu in WordPress
3. A new **Mobilize** menu item will appear in your WordPress **Settings** area
4. Configure the menu options
5. Add your menu to **Mobilize** section in **Appearance** -> **Menus** area
6. Done!
